

Mark 575 Series

Self-Operated Back Pressure Regulators

The Mark 575 Wafer Style Sliding Gate Back Pressure Regulator is used to regulate upstream pressure at a predetermined setpoint. The spring in the Mark 575 holds the sliding gate seats in their normally closed position.

The upstream pressure is sensed beneath the diaphragm. As the upstream pressure exceeds the setpoint, pressure is exerted on the diaphragm which raises the stem to modulate the disc (the movable component of the sliding gate seat set) toward the open position. As the seats open, upstream pressure will be regulated to the required setpoint. A decrease in pressure allows the spring and diaphragm to move the seats toward the closed position.

MARK 575 FEATURES

- **Wafer Style Body** — reduces weight
- **High Capacity** — 6" (DN150) provides 400 Cv (345Kv)
- **No Sensing Line Required**
- **Sliding Gate Trim** — unique seat design for unsurpassed trim life and accuracy.
- **Jorcote Seat Coating** — ceramic composite for liquids, gases and especially steam. Very low friction with outstanding wear resistance and a temperature rating of up to 550°F (288°C). Steam tested to 1,000,000 cycles and still maintained Class IV leakage.
- **Jorlon Diaphragm** — extremely durable, virtually universally applicable up to 450°F. Tested without failure to over 1,000,000 full stroke cycles. Ideal for steam, gases and liquids. 316SST diaphragm applicable up to 550°F.
- **Straight-through Flow** — The flow is straight through the valve seats and body. Direction of the disc travel is perpendicular to the flow, not opposed to the direction of the flow. Thus, the flow does not unbalance the seats. The MK575 can use a wider range of its stroke to give accurate control; less offset and rangeability up to 20:1.
- **Quiet Operation** — typically 5-10 dB less than conventional globe style regulators. The disc and plate are always in contact, which eliminates chattering. Straight-through flow minimizes turbulence. Multiple orifices in the plate and disc divide the flow stream into smaller flow components.
- **Minimum Maintenance** — The MK575 sliding gate seats require no special tools for disassembly. The seats are pre-lapped at the factory and are self-lapping while in operation ensuring a continual tight shutoff.

MARK 575 SERIES - SUPERIOR ON STEAM APPLICATIONS, IDEAL FOR GAS AND LIQUIDS

SPECIFICATIONS

Sizes: 3" (DN80) through 6" (DN150)
ANSI 150# / 300# (PN25/40) Class Wafer Style
Valves (bolt-around)

Body Materials:

- Carbon Bar (A105)
- Carbon Steel (WCB)
- Stainless Steel (CF8M)
- Stainless Steel Bar (SA-479)
- Others on application – Consult Factory

Body Seals

- Jorlon Body Gasket
- Fiber Gasket for Body/Bonnet

Diaphragm

- Jorlon
- EPDM
- Neoprene/Nylon
- Viton
- Buna-N
- Others on application – Consult Factory

Trim

- 316SS/TFE
- Monel/TFE
- Alloy 20/TFE
- Hastelloy C/TFE
- Others on application – Consult Factory

Seats: 316SS/Jorcote; Others on application – Consult
Factory

Pressure Ranges:

- 4-15psi (0,28-1,03bar)
- 7-24psi (0,48-1,65bar)
- 16-30psi (1,10-2,07bar)

Max Delta P: 50 psi

Cv (Kv):

- 9.5 (8,2)
- 33 (28)
- 38 (33)
- 72 (62)
- 76 (66)
- 103 (89)
- 180 (155)
- 400 (345)

Shutoff: ANSI Class IV

Options:

- Handwheel- In Range
- Stainless Bolting
- Clean for Oxygen Service
- Clean for Oil Free Service

PRESSURE/TEMPERATURE CHART

Carbon and Stainless 300#

SLIDING GATE FEATURES & BENEFITS

Jordan Valve's Sliding Gate Seats

Installed in the widest range of gas, chemical and steam applications the world over, our pressure regulators, temperature regulators and control valves have been providing the following benefits for over fifty years.

Shorter stroke length than globe or cage designs

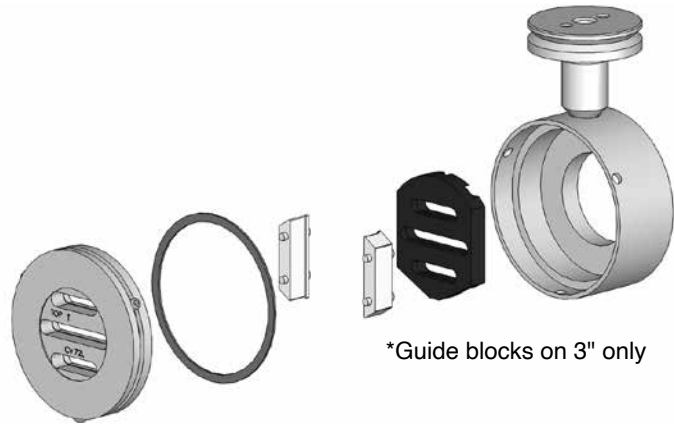

- Provides faster response to input signal changes
- Significantly extends packing and diaphragm life
- Allows for more compact valve/actuator assembly

Straight-through flow

- Significantly reduces turbulence, thereby reducing noise and erosion
- Markedly increases rangeability associated with "flow to open" and "flow to close" designs
- Eliminate valve "chatter" commonly observed when valve is partially open

Ease of maintenance

- During seat/Cv change (seats are not screwed or pressed in body)
- Attributable to lightweight, compact design
- Fewer trim components

Features

- Easy installation between flanges with wafer body
- High flow rates
- Self cleaning, self lapping seats
- Reduced noise compared to conventional globe/cage valves
- More resistant to cavitation / flashing with straight through, wafer design
